

- Understand What's Happening Over Your Network
- Predict Application Performance Prior to Rollout or Migration
- Manage and Resolve Application Performance Issues Fast

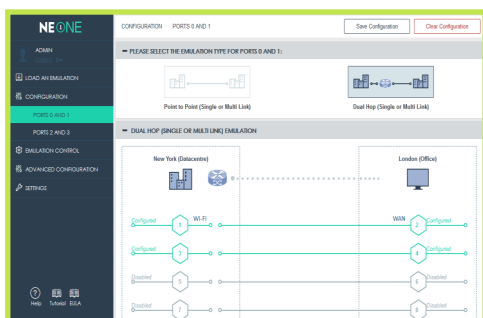

Network Emulation & Network Profiling in a Single Appliance

iTrinegy's NE-ONE is unique in offering two compelling and complementary network and application performance capabilities available as standalone solutions or in combination on the same

NE-ONE EMULATOR

A sophisticated but very simple to use Network Emulator featuring a highly intuitive pictorial web GUI with unique self configuration capability.

KEY FEATURES

- A choice of 50 Mbps, 100 Mbps, 200 Mbps & 1 Gbps models
- A choice of Single or Multi link (5, 10 or 20) and dual/last mile hop capability.
- An integrated LCD allowing you to configure and run network emulations standalone.
- A highly intuitive pictorial web GUI with unique self configuration for impairment values.
- Multi-user (all Models) with dual emulation (Model 20)

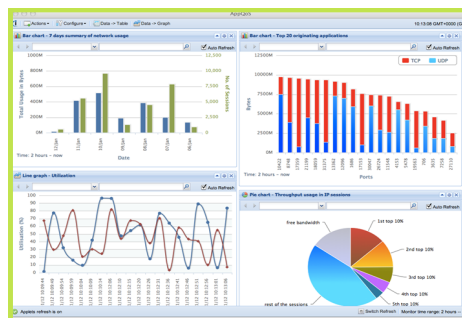

KEY DELIVERABLES

- Recreate existing or proposed new networks
- See how applications behave before they are deployed in your current production environment or when migrated, for example, to The Cloud
- Avoid the need for costly post-deployment application re-engineering or fixes

Please see the **NE-ONE Emulator** product sheet for a more comprehensive explanation of its features and capabilities.

NE-ONE PROFILER

An extensive Network Profiler delivering analysis on network traffic, utilization and application performance through an elegant widget based web GUI.

KEY FEATURES

- No agents required
- Passive, out of band, with no overhead on the network infrastructure
- Rapid Installation (less than 15 minutes) connected via mirrored switch port or tap
- No setup reporting configuration required
- Use captured profiles for play back by NE-ONE Emulator to enhance realism of the test environment

KEY DELIVERABLES

- Monitor and resolve application problems before they affect end users
- Help mitigate risk in transformation projects
- Ensure there's no loss of user productivity or revenue

Please see the **NE-ONE Profiler** product sheet for a more comprehensive explanation of its features and capabilities.
